Protein Information

Synonyms	IL17RE.
Calculated MW	Calculated MW: 75 kDa; Observed MW: 75 kDa
Uniprot ID	Q8NFR9
Gene ID	132014
Background	This gene encodes a transmembrane protein that functions as the receptor for interleukin-17C. The encoded protein signals to downstream components of the mitogen activated protein kinase (MAPK) pathway. Activity of this protein is important in the immune response to bacterial pathogens. Alternatively spliced transcript variants have been described for this gene.
